## About the Download Manager

The Download Manager provides for more effective, more efficient file downloads than you normally see with your browser, especially for large files or file sets. It can pause and restart downloads even if you turn your computer off and on again. You will be presented with a security warning and after you accept, the Download Manager will install and begin to download the requested file.

[Click to download your file now.](#)

Should the Download Manager fail to start, or if you do not accept the security certificate, you can [click here](#) to download the file without using the download manager.
